

01 / SUMMARY

Senior Frontend Engineer with **10 years** shipping React & TypeScript at production scale to **Mercedes-Benz, Sonova, Thalia, and TBO Clothing** — multi-tenant architecture, design systems, Core Web Vitals under 2 seconds. I reach into **NestJS and LLM orchestration** when the product needs it; the work that ships is mostly the frontend.

02 / EXPERIENCE

Independent Full Stack Engineer — Contract & Product Apr 2026 — Present

Self-employed · Remote

- Built **refine.pk**, a full e-commerce store — listings, cart, checkout, auth, admin — scoring **100 / 100 / 100 / 100** on desktop and **99 on mobile** under slow 4G throttling, with zero layout shift.
- Building an early-stage SaaS as **co-founder and sole engineer**: a website and lead-tracking platform for local service businesses that shows them which marketing channel actually brings paying customers.
- Built it from zero — multi-tenant architecture, block-based site editor, form builder, teams and roles, Stripe billing, and a tracking system spanning short links, attribution, and Meta/TikTok server-side conversion events.

Senior Frontend Engineer — Full-Stack & AI Orchestration 2022 — 2026

Decommerce · Remote, Europe

- Led the frontend of a white-label, multi-tenant B2B SaaS community platform shipped to enterprise clients across Europe — **Mercedes-Benz, Sonova, Thalia, TBO Clothing**. Built the multi-tenant design system that drives every tenant surface from one set of brand tokens: zero duplicated code per tenant, **per-client setup time down 60%**.
- Delivered **four production Next.js apps** (SSR + PWA) with **sub-2s cold load on 4G** and **Lighthouse 92+** across Performance, Accessibility, and Best Practices. Cache keyed at `tenant:campaign` so editors see changes instantly while every other surface keeps rendering from cache.
- Architected **Klaire**, an AI onboarding agent (NestJS · Next.js · Langbase · GPT-4o · Puppeteer) that collapsed enterprise campaign setup from **one week to under 20 minutes**, with zero developer hours per new client.
- Built a B2B outbound automation pipeline in n8n (Apollo · Claude · PhantomBuster · GPT-4o · Vapi) running **6,316 executions / week** on self-hosted GCP.

Senior React / Next.js Engineer — Performance & Architecture 2021 — 2022

ComOn Enterprise LLC · parent company of Decommerce · Remote

- Overhauled a React codebase scoring **under 50 on Lighthouse** — performance optimization, code-splitting and rendering fixes pushed scores to **92+**, turning a sluggish product into a fast, accessible app.
- Led the architecture migration to a **headless Shopify storefront on Gatsby** — SSG + SSR delivering sub-second page loads across the store.
- Established a shared **35+ component Storybook library** with strict design tokens that eliminated duplicate UI code across **3 teams** and cut design-to-code handoff from days to hours.

Frontend Engineer & Team Lead — React Native & AR 2018 — 2020

Smart Reality · Lahore, Pakistan

- Led **5 engineers** to ship a React Native + Unity 3D AR education app in 11 months — **1,000+ downloads**, 4.2 rating, and under **80ms AR frame latency** on mid-range Android.

Freelance Web Developer 2020 — 2021

Self-employed · Lahore, Pakistan · sites for local retail and service businesses

Frontend Developer 2016 — 2018

AcroEx · Lahore, Pakistan

- Shipped **11 ThemeForest templates** generating **10,000+ cumulative sales** (top 5% of sellers). Built responsive UIs across 8+ client projects, cutting QA bugs by **30%**.

03 / WHERE I'M STRONGEST

- Performance.** Core Web Vitals under 2s by design, not as an afterthought.
- AI in product.** LLMs streaming into real interfaces, with the validation layer that makes output trustworthy.
- Scale.** Multi-tenant design systems and Storybook-driven dev across multiple teams.
- Reliability.** AI for judgment, deterministic code for anything that has to be correct and cheap.

04 / STACK

LANGUAGES	TypeScript · JavaScript (ES6+) · HTML · CSS · SQL
FRONTEND	React · Next.js · Gatsby · React Native · SSR · PWA · Storybook · Tailwind · Design tokens
BACKEND & INFRA	Node.js · NestJS · PostgreSQL · Redis · BullMQ · GCP · REST
AI & AUTOMATION	Claude · GPT-4o · Langbase · n8n · Vapi · Puppeteer · Tool calling · Agent loops
ARCHITECTURE	Multi-tenant SaaS · White-label systems · Event-driven · Job queues

05 / EDUCATION

ACCP Pro Diploma — Aptech Computer Education, Lahore CS curriculum equivalent to BSCS
